Your Mission Today

Today you run a REAL AI assistant on your own computer with OpenClaw! Give it missions, watch it work, teach it about you, and keep it SAFE. Pick a Driver and switch each mission.

Setup Check (5 points)

Tick these off as a group before Mission A:

Node.js is installed (node --version shows 22 or higher)

OpenClaw is installed (openclaw --version works)

Onboarded with OpenRouter using the class key

Model set to DeepSeek V4 Flash

Gateway is running in one terminal (openclaw gateway)

You got a reply in 'openclaw chat'

Mission A - First Contact (15 points)

In 'openclaw chat', type this to your assistant:

Introduce yourself in two sentences. What can you help me with?

What did your assistant say?

Does it have a name or model? (ask if not):

Mission B - Watch It Act (20 points)

Now give it a real task. Type this:

Make a file called space.txt with one cool fact about space.

Watch closely: it will ASK permission before it does anything.

When it asked to run a command, did you...

- A) Approve (after reading it)
- B) Deny

What command did it ask to run?

Did the file get made? What was inside it?

Concept: 'ask' mode

Your assistant didn't just talk -- it ACTED on your computer. And it asked first! That 'approve / deny' step is called ask mode. Always read the command before you approve.

Mission C - Give It a Personality (15 points)

Make your assistant your own. Pick a name and a vibe, then type:

From now on your name is Nova, a cheerful helper. Re-introduce yourself.

What did you name your assistant?

How did its replies change after you gave it a personality?

Mission D - Make It Remember (15 points)

Tell your assistant a fact about your group:

Remember: my team is the Sharks and our favorite game is Minecraft.

Then, in the SAME chat, ask:

What is my team's name and our favorite game?

Did it remember? What did it say?

Bonus: ask it to SAVE that to its memory so it knows next time, too!

Did it save your fact to memory? (yes/no):

Mission E - Interview Your Assistant (15 points)

Ask your assistant how it works. Write its answers in your own words.

In 2-3 sentences, how do you remember things about me?

Memory - in your own words:

What is an API key, and why should I keep it secret?

API key - in your own words:

Before running a command on my computer, what do you do first?

It said it first:

Mission F - Quick Quests (10 points)

Do as many as you can. Check the box when your group finishes one!

Ask it to make jokes.txt with 3 kid-friendly jokes

Ask it to write a 4-line poem about robots and save it

Ask it to make a weekend to-do list file

Ask it to make a study plan for your favorite subject

Ask it to list every file in your folder

Which quest was your favorite, and what did it make?

Reflection (5 points)

What was the coolest thing your assistant did today? Why?

BONUS: Design Your Dream Assistant (+10 points)

Bonus Challenge

If you had an AI assistant at home, what would it do for you? Design it below -- and remember one safety rule, since assistants are powerful!

Assistant's name:

One job it does for you:

One safety rule it follows:
