

Intro to Coding & TypeScript — Homework

No computer needed! Answer from what you learned in class. Type into the boxes.

Group / Name:

Date:

Part A — Match the Word to Its Meaning

Read the meanings A–H. Then write the correct letter in the box next to each word.

- A. A labeled box that stores a value so you can use it later
- B. The command that prints a message to the screen
- C. Finding and fixing mistakes in code
- D. A type that can only hold true or false
- E. JavaScript plus a type 'safety net' (created by Microsoft)
- F. A type for text, always written inside quotes
- G. The 1s and 0s that a computer really understands
- H. A type used for any number

Now match each word to a meaning above:

- | | |
|------------------------------------|--------------------------------------|
| ☐ Variable | ☐ console.log |
| ☐ string | ☐ boolean |
| ☐ Debugging | ☐ TypeScript |
| ☐ number | ☐ Binary |

Part B — True or False

Write T or F in the small box at the left of each statement.

- ☐ A computer does exactly what you tell it, step by step.
- ☐ In TypeScript, text values go inside quotation marks.
- ☐ Because AI can write code, humans no longer need to understand it.
- ☐ Microsoft created and still maintains TypeScript.
- ☐ A boolean variable can hold the number 100.
- ☐ console.log is used to print things to the screen.

Part C — Explain It in Your Own Words

1) What does a VARIABLE do? Give one example of a variable you might use in a game.

2) Name the three basic types you learned and what each one holds.

3) Even though AI can write code, why is it still important for YOU to learn how to code? (1–2 sentences)

Part D — Design Challenge: Build a Character (on paper!)

No computer needed — just write the code lines the way we did in class.

Invent a game character. Write the TypeScript variables you would use for it. Include at least a name (string), a level (number), and one boolean (like isHero). Add the correct type to each one!

REMEMBER THE PATTERN

Example format: `let name: string = "Bolt"; let level: number = 7; let isHero: boolean = true;`

Bonus: write one `console.log` line that would print a fun message about your character.
