

Classwork: VS Code and TypeScript Setup

100 points + 10 bonus points | Install once, then write, compile, and run

Student name

Date

Part 1 - Open the Coding Tools

20 points

Open VS Code and its terminal. Windows students use Command Prompt. macOS students use the normal zsh terminal.

Run `node --version`. Record the output:

Run `npm --version`. Record the output:

If a command failed, copy the exact error or explain it:

Part 2 - Install TypeScript Once

20 points

Follow the teacher, then run:

```
npm install -g typescript
tsc --version
```

TypeScript version or exact error:

What does global mean in this lesson?

Workspace and First Run

Classwork continued

Part 3 - Create a Workspace

15 points

- ☐ Created or opened KidsComputerScience
- ☐ Created 2026-08-01-decisions inside it
- ☐ Opened the dated folder in VS Code
- ☐ Created and saved decisions.ts

Folder and file names shown in the Explorer:

Why is it safe to trust this workspace?

Part 4 - Compile and Run

20 points

```
let score: number = 82;

if (score >= 70) {
  console.log("Hero rank!");
} else {
  console.log("Keep training!");
}
```

1. Compiler command

2. New file

3. Run command

4. Terminal output

Decision Ladder

Classwork continued

Part 5 - Build and Test Four Outcomes

15 points

Upgrade the program: 90 or more is Legend, 70 or more is Hero, 50 or more is Explorer, and anything lower says Keep training.

Write your completed TypeScript code:

Score 95 output

Score 70 output

Score 49 output

One extra test

Why should the score conditions go from highest to lowest?

Remember

The program checks from top to bottom and stops at the first true branch.

AI Logic Bug Hunt

Classwork conclusion and bonus

Part 6 - AI Logic Bug Hunt

10 points

```
let score: number = 95;
if (score >= 50) {
  console.log("Explorer rank!");
} else if (score >= 90) {
  console.log("Legend rank!");
} else {
  console.log("Keep training!");
}
```

1. What prints for 95?

2. Why does the program stop at the wrong branch?

3. Rewrite the conditions in the correct order:

4. Why must humans test AI-written code?

Bonus - Add and Test a New Branch

+10 points

New condition and message:

Two test values and expected outputs:

Submit to: 1. Microsoft Teams 2. Ishwari Raut ma'am

Include code and terminal output. Playground evidence earns equal credit.
