

Homework: Build Your Coding Workspace

100 points + 5 bonus | Due before class on August 8, 2026

Student name

Date

Part 1 — Choose the Safe Route

10 points

- ☐ Windows — follow the attached Windows Setup Guide
- ☐ macOS — follow the attached macOS Setup Guide
- ☐ I will use only the official links in my guide
- ☐ I will never share my computer password
- ☐ I will save exact errors instead of changing security settings by guessing

Computer or operating-system details

Part 2 — Install and Open VS Code

20 points

- ☐ Downloaded Visual Studio Code from code.visualstudio.com
- ☐ Installed it using the steps for my operating system
- ☐ Opened Visual Studio Code successfully

VS Code version or About information

What is VS Code's job?

Install Node.js LTS

Homework continued | Use the official Node.js website

Part 3 — Install Node.js LTS and npm

20 points

Open nodejs.org, choose the LTS release, finish the installer, then close and reopen the terminal before checking versions.

☐ I selected the LTS release, not Current

☐ The Node.js installer completed

Run: `node --version`

Run: `npm --version`

What is Node.js's job in our beginner workflow?

What is npm's job in this setup?

If a command failed, copy the exact message:

Help is available

Bring the exact error to the 4:30–5:30 PM Pacific Hangout Session.

Install TypeScript Once

Homework continued | Global beginner setup

Part 4 — Install TypeScript Globally

20 points

Open a new terminal and run the command exactly. A global install makes the tsc command available for our small beginner exercises.

```
npm install -g typescript  
tsc --version
```

TypeScript version

In this assignment, what does globally mean?

If the command failed, copy the exact message:

Permission safety

Do not share a password or copy random permission fixes. macOS students with EACCES should record the error and bring it to the teaching team or Hangout Session. Use sudo only if the approved guide/helper directs you on your own computer.

Compile and Run a Local File

Homework continued | Follow the workflow in order

Part 5 — Create local-ready.ts

20 points

Create a folder you can find again, open it in VS Code, create local-ready.ts, and type the short program below.

```
const score: number = 82;

if (score >= 90) {
  console.log("Legendary");
} else if (score >= 70) {
  console.log("Hero");
} else {
  console.log("Keep training");
}
```

Folder name

Compile command

Generated JavaScript file

Run command

Terminal output

Change score to 69. What prints?

One problem you solved or one step that worked well:

Evidence, Reflection, and Submission

Homework conclusion

Part 6 — Evidence and Reflection

10 points

Attach screenshots or copy version outputs. Never include passwords, private folders, or personal information.

Evidence attached or recorded

- ☐ VS Code opened
- ☐ Node.js, npm, and TypeScript versions
- ☐ local-ready.ts and its terminal output

Why will these local tools help in a future programming class?

How can a programmer verify AI-generated TypeScript before trusting it?

Bonus — Bring a Helpful Setup Note

+5 points

Write one setup tip or exact error-and-solution pair that could help another student.

Submit to Microsoft Teams AND Ishwari Raut ma'am. Hangout: 4:30–5:30 PM Pacific.
