

# Building with AI

## Homework: Vibe Coding

Name:

Date:

*No computer needed for this one! Show what you remember about building apps and games with AI. Finish with a creative challenge.*

### Part 1 — Matching

*Write the letter of the correct definition in the box next to each term.*

- A. Building software by describing it in plain language instead of typing all the code yourself.
- B. The code that gives a web page its structure — the skeleton, like buttons and boxes.
- C. The code that controls colors, fonts, and style — how everything looks.
- D. The code that controls behavior — what happens when you click, move, or score.
- E. The tab where you can use and test the app you just built.
- F. Changing or fixing your app by describing what you want different.
- G. The exact words you type to tell the AI what to make.
- H. The Gemini tool where you build apps, games, and web pages.

**Vibe coding**

**HTML**

**CSS**

**JavaScript**

**Preview**

**Refine / Debug**

**Prompt**

**Canvas**

### Part 2 — True or False

*Write T (true) or F (false) in each box.*

You need to be an expert coder to build something with Gemini Canvas.

CSS is the part of the code that controls colors and style.

A vague prompt usually gives you exactly what you imagined.

"Debugging" means describing a problem and getting it fixed.

Real programmers usually get everything perfect on the very first try.

### Part 3 — Multiple Choice

Write the letter of the best answer in the Answer box.

**Which part of the code is like the "brain" that decides what happens when you click?**

Answer:

- a) HTML
- b) CSS
- c) JavaScript
- d) The Preview tab

**What is the BEST first step before building an app in an app-builder tool?**

Answer:

- a) Pick random colors
- b) Write a clear prompt describing it
- c) Share it with friends
- d) Close the app

**Why is being specific in your prompt important?**

Answer:

- a) It makes the AI slower
- b) It uses more battery
- c) The AI knows exactly what to build
- d) It doesn't matter at all

## Part 4 — Short Answer

1. In your own words, explain the Build - Test - Refine loop.

2. Why does being specific in a prompt give you better results?

3. Write a prompt for an app-builder tool to make a study app for a subject you like. Use the recipe: Build a... that... It should have... Make it look... It's for...

## Part 5 — Creative Challenge: Design Your Dream App!

Imagine you could build anything. Plan it out below.

**App name:**

**What does it do?**

**List 3 features it should have:**

**Write the exact prompt you would give the AI to build it:**

**Sketch what your app looks like:**
