

CLASSWORK: Agentic AI Mission Control

Page 1 of 4

From vibe coding to supervised AI agents

Name:

Date:

Today's Mission

You will use an AI app-builder like Gemini Canvas, but you are the supervisor. Before prompting, define the goal, safety rules, and tests. Then make small changes, observe what happened, and refine.

Part A - Choose Your Starting App (10 points)

- ☐ I am using my May 30 app/game.
- ☐ I am building a fresh Gemini Canvas app.
- ☐ I am using the teacher starter quiz prompt.

What app or game are you improving today?

Part B - Agent Job Brief (30 points)

Goal: What should the AI help you accomplish?

Success Criteria: How will you know it worked?

Allowed Tools: What can the AI use?

Not Allowed: What should the AI never do?

Approval Required: What must the AI ask before doing?

SUBMISSION: 1. Microsoft Teams 2. Copy to Ishwari Raut ma'am

Due: End of class | Total Points: 100 (+10 bonus)

Part C - Ask for a Plan First (15 points)

Prompt Tip

A supervised agent should plan before it changes things. Ask for a short plan, read it, and approve or revise it.

Write your plan-first prompt:

What plan did the AI suggest?

Did you approve the plan or change it? Why?

Part D - Two Small Improvements (25 points)

Improvement 1 prompt:

What changed after improvement 1?

Improvement 2 prompt:

What changed after improvement 2?

Good Supervisor Move

Use prompts like: Make only one change. Keep the existing score working. Do not replace the whole app. Explain what you changed.

Part E - Bug Fix Mission (15 points)

What bug or confusing behavior did you notice?

Bug-fix prompt:

What happened after the AI tried to fix it?

Part F - Test Checklist (15 points)

Check each test you actually performed. Add one custom test of your own.

- ☐ I opened Preview and used the app like a student would.
- ☐ I clicked every button or answer choice.
- ☐ I checked whether the score or result changed correctly.
- ☐ I tested the restart/reset behavior.
- ☐ I checked that the text is readable.

My custom test:

What did your tests prove? What still needs work?

Part G - Future Agent Tools Reflection (15 points)

Important

Tool-using agents can connect AI to real tools such as files, browser control, commands, messages, and skills. More power means more safety rules.

If a future agent worked on your app, what tools would it need?

What should require your approval before the agent does it?

What should the agent never do in a class project?

Part H - Share and Reflect (10 points)

What are you most proud of from today's build?

What did testing help you catch or confirm?

In one sentence, explain supervised agentic AI.

Bonus - Better Supervisor Prompt (+10 points)

Write one excellent prompt that includes goal, limits, and testing:
