

HOMEWORK: Agent-Ready Workflow

Page 1 of 4

Design a safe agent workflow - no install required

Name:

Date:

No Install Required

You are designing an agent-ready workflow, not installing a new platform. The goal is to show that you know how to give an agent safe instructions, tool limits, approval rules, and tests.

Part 1 - Pick a Safe Agent Task (15 points)

Choose a task that is useful but safe for a beginner agent.

- ☐ Study helper or flashcard maker
- ☐ App/game tester
- ☐ Research organizer
- ☐ Schedule or checklist helper
- ☐ Other safe task

Describe your chosen task in one or two sentences:

Part 2 - Goal and Success Criteria (25 points)

Goal: What should the agent accomplish?

Success Criteria: List 3-5 ways to know the task worked.

SUBMISSION: 1. Microsoft Teams 2. Copy to Ishwari Raut ma'am

Due: Next class | Total Points: 100 (+5 bonus)

Part 3 - Tools and Permissions (25 points)

Think Like a Supervisor

A tool is something the agent can use to take action. Pick only the tools your task truly needs. Extra tools create extra risk.

Which tools should your agent be allowed to use?

- ☐ Web search
- ☐ Browser or app preview
- ☐ Read files
- ☐ Write or edit files
- ☐ Run code or commands
- ☐ Send messages or emails
- ☐ Use memory from previous sessions

Explain why each selected tool is needed:

Part 4 - Not Allowed (15 points)

What should your agent never do?

Examples: delete files, share personal info, spend money, message people, change settings.

Part 5 - Human Approval Rules (20 points)

List actions that must stop and ask you before continuing.

- ☐ Before deleting or replacing files
- ☐ Before sending a message or email
- ☐ Before running a command
- ☐ Before using personal information
- ☐ Before changing the whole project idea

Write your approval rule in your own words:

Part 6 - Test Plan (15 points)

How will you test whether the agent succeeded?

What would count as failure?

If it fails, what should the agent do next?

Part 7 - Example Prompt (10 points)

Prompt Recipe

Write a prompt that includes the goal, success criteria, allowed tools, not allowed actions, approval rules, and test plan.

Write the exact prompt you would give your agent:

Part 8 - Reflection (10 points)

Why is human supervision important for agentic AI?

What is one agent safety rule you understand better now?

Bonus - Safer Workflow Upgrade (+5 points)

Add one extra guardrail that would make your agent safer:
