Member 3:

Date:

Your Mission (Read Carefully!)

The Challenge

Your team will create a short presentation or story that reviews the key AI concepts we have learned since April. You will present it to the whole class at the end (~3-4 minutes). Your story should include an AI character or agent and show how it works.

Roles — Assign One Per Person

AI Architect — designs the AI character/agent

Pick the LLM, write a system prompt (use RTCF), choose a temperature, list the tools and memory your agent needs.

Story Director — writes the demo scenario or skit

Show the Think->Act->Observe loop in action, include a moment where the AI hallucinates and the user catches it.

Presenter/Designer — builds slides or visuals, leads delivery

Create slides or a poster, make sure key vocab is shown, and practice the group's presentation.

AI Architect:

Story Director:

Presenter/Designer:

AI ARCHITECT — Design Your Agent (35 points)

Your Job

Design the AI character that stars in your team's story. Fill in every detail below. Think about what you learned about LLMs, prompting (RTCF), agents, tools, and memory.

Agent Name:

Which LLM powers your agent? (pick one)

GPT (OpenAI)

Claude (Anthropic)

Gemini (Google)

Other (name it below)

Other LLM:

System Prompt — Write the hidden instructions using RTCF:

R = Role | T = Task | C = Context | F = Format

Temperature Setting (circle or write):

Low (0.0-0.3) = factual/safe | Medium (0.4-0.7) = balanced | High (0.8-1.0) = creative

Temperature:

What TOOLS does your agent have? Check all that apply:

Web search

Code execution

Send email / message

Calendar / reminders

Image generation

File reader / writer

Other tools:

What kind of MEMORY does your agent use?

STORY DIRECTOR — Write the Scenario (35 points)

Your Job

Write a short story or skit that shows the agent in action. It MUST include the Think->Act->Observe loop AND a moment where the AI hallucinates and the user catches it.

What task does the user give the agent?

Step 1 — THINK: What does the agent plan to do first?

Step 2 — ACT: What tool does it use and what does it do?

Step 3 — OBSERVE: What result does the agent see?

Does the agent loop again? What happens next?

HALLUCINATION MOMENT: Describe when the AI gets something wrong
and how the user catches it and corrects it.

PRESENTER/DESIGNER — Build & Present (20 points)

Your Job

Create visuals (slides, a poster, or a diagram) and lead the team's presentation. Make sure you include key vocabulary from our April-May lessons.

What format is your presentation? (slides, poster, skit, etc.)

Format:

Which KEY VOCABULARY will you show on your visuals?

Check at least 6:

- LLM / Large Language Model
- Transformer
- Next-token prediction
- RTCF (Role/Task/Context/Format)
- Meta prompting
- Hallucination
- AI Agent
- Think -> Act -> Observe
- Tools / Tool calls
- Context window
- Temperature
- Attention
- Tokens

Outline your slides/visuals (what goes on each slide or section):

Presentation plan: Who says what? (practice notes)

TEAM REVIEW — Put It All Together (10 points)

Before you present, review as a team:

- Our story includes the Think -> Act -> Observe loop
- Our AI character has a system prompt written with RTCF
- We included a hallucination moment and how to catch it
- We mention at least 6 vocabulary terms from class
- Every team member has a speaking part
- We practiced and are ready to present (3-4 minutes)

Team self-assessment: What is the BEST part of your project?

What would you improve if you had more time?

BONUS: Audience Feedback (+10 points)

While watching other teams present, write feedback:

Team presenting:

One concept they explained really well:

One question you have about their presentation:
